

Samuel Degen

PAB 2-429, Department of Physics, UCLA, Los Angeles, CA 90024, USA
degen@ucla.edu — [website](#) — updated 8/18/2025

Education	University of California Los Angeles (UCLA) <i>B.S. Physics</i> GPA: 3.984 (overall); 4.0 (major)	<i>9 / 2023 - present</i>
	University of Colorado Boulder <i>High School Concurrent Enrollment</i> GPA: 4.0 (overall)	<i>2021 - 2023</i>
Honors	UCLA Undergraduate Research Scholars Program (URSP) <i>Undergraduate Research Center - Sciences, UCLA; Los Angeles, CA, USA</i> <ul style="list-style-type: none">Research scholarship supporting the proposal “<i>Gravitational Wave Scattering with Backreaction: Love Numbers & Gravitational Self-Force</i>” with Mikhail SolonFrom offer letter: “<i>This selection places you in a distinguished group of undergraduate researchers and represents the College’s confidence in your strong academic record and ability to engage in significant research endeavors.</i>”	<i>2025 - 2026</i>
	Mani L. Bhaumik Institute for Theoretical Physics Summer Research Fellowship <i>Mani L. Bhaumik Institute for Theoretical Physics, UCLA; Los Angeles, CA, USA</i> Advisors: Zvi Bern & Mikhail Solon (Scattering Amplitudes) <ul style="list-style-type: none">First undergraduate offered a summer research fellowship at UCLA’s Bhaumik Institute for Theoretical Physics	<i>8 - 9 / 2025</i>
	University of Tokyo Research Internship Program (UTRIP) <i>Dept. of Physics, The University of Tokyo (東京大学); Tokyo, Japan</i> Advisor: Haozhao Liang (Nuclear Theory) <ul style="list-style-type: none">1 of 14 students selected from 1,149 applicants for in-person, fully funded 6-week research and culture program in Tokyo<i>Friends of UTokyo, Inc. (FUTI) Global Leadership Award</i> – prestigious funding award for USA students to research in Japan (1 of 2 UTRIP students)	<i>6 - 7 / 2025</i>
	Perimeter Institute’s PSI START Satellite Program (Perimeter Scholars International Students’ Training Accelerator for Research in Theory) <i>Bishop’s University; Sherbrooke, Quebec, Canada</i> <ul style="list-style-type: none">1 of 3 international students selected for in-person, fully funded 2-week intensive theoretical physics coursework in Quebec, Canada	<i>5 / 2025</i>
	UCLA Summer Undergraduate Research Fellowship <i>Dept. of Physics & Astronomy, UCLA; Los Angeles, CA, USA</i>	<i>Summer 2024</i>

Advisor: E. Paulo Alves (Plasma Theory)

- 1 of 2 first-year undergraduates selected for competitive paid 10-week research fellowship

Member of Colorado Math Team (ARML)

Summer 2023

2nd in State of Colorado for Core Value Debate

2021

Presenting Research

and Talks

$\triangle =$ *invited*

Gravitational Wave Scattering with Backreaction: Love Numbers & Gravitational Self-Force

- California Amplitudes Meeting 2025 (LA), UCLA [planned 11 / 2025]

Physics Without Borders: Nuclear Theory and Global Perspectives from a Summer in Tokyo

- \triangle UCLA Research Experiences for Undergraduates (REU) *August 15, 2025*
Special Seminar, UCLA

Benchmarking FRG-DFT with the One-Dimensional Fermi Gas – Towards a Nonperturbative Many-Body Nuclear Theory

- UTRIP Final Presentation, The University of Tokyo *August 5, 2025*
- Oral Contributions, APS Far West Section Meeting, UC Santa Cruz [planned 10 / 2025]

Data-driven statistical model of nonthermal particle acceleration by the kink instability in relativistic jets

- Department of Physics Summer 2024 Research Talks, UCLA *August 22, 2024*
- [Plasma Astrophysics Oral Contributions \(NO05.00014\)](#), 66th Annual Meeting of the APS Division of Plasma Physics; Atlanta, Georgia *October 9, 2024*

Pedagogy

From Finite Groups to Lie Algebras: Symmetries and Representations in Physics

- Perimeter Institute's PSI START Satellite Program, Bishop's University; Quebec, Canada *May 29, 2025*

Convex Compactness and its Applications

- APPM 6560 Final Presentation, CU Boulder *May 1, 2023*

Pedagogical Unpublished

Articles

S. Degen, [An Introduction to 3D Gravity from TQFTs](#) *6 / 2025*
(UCLA PHYS 242C Final Project)

S. Degen, [Tensor Products of Representations of Lie groups](#) *10 / 2024*
(UCLA MATH 229A Final Project)

**Meetings
Attended**

[California Amplitudes Meeting 2025 \(LA\)](#); Mani L. Bhaumik Institute for Theoretical Physics, UCLA [planned 11 / 2025]

[2025 Annual Meeting of the APS Far West Section](#); UC Santa Cruz [planned 10 / 2025]

Research	The University of Tokyo (東京大学) Undergraduate Researcher			5/2025 - present
	<i>H. Liang Nuclear Theory Group</i>			5/2025 - present
	<p>How humans can make a safe and efficient use of nuclei – such as through fission and fusion processes – is a difficult question, requiring a deep microscopic understanding of quantum many-body theories. The treatment of long-lived fission products by nuclear power plants depends strongly on the specifics of quantum many-body tunneling, a long-standing problem that requires a first principles (<i>ab initio</i>) theory of properties of nuclei. While there are many established microscopic nuclear theories, the only approach applicable to almost the whole nuclear chart is Density Functional Theory (DFT). Our work uses modern theoretical tools such as Effective Field Theory (EFT) and Renormalization Group (RG) Flow to construct such an <i>ab initio</i> nuclear DFT.</p> <p><i>Supported by UTRIP 2025 and FUTI Global Leadership Award.</i></p>			
	UCLA Undergraduate Researcher			1/2024 - present
	<i>Z. Bern & M. Solon Scattering Amplitudes Group</i>			8/2025 - present
	<p>Project TBD.</p> <p><i>Supported by Mani L. Bhaumik Institute for Theoretical Physics Summer 2025 Research Fellowship and 2025 - 2026 UCLA URSP.</i></p>			
	<i>E.P. Alves Plasma Theory Group</i>			4/2024 - 1/2025
	<p>Developed novel ML-based methods for studying time-dependent particle acceleration in relativistic astrophysical jets. My work resolves longstanding limitations of standard models by combining analytic theory and machine learning to uniquely solve ill-posed problems for the first time. Demonstrated that simple energy-dependent models are insufficient to explain the observed nonthermal particle spectrum and that these novel ML methods can be generalized to solve a large class of ill-posed problems—uniquely identifying physical solutions from an infinite family of solutions that perfectly reconstruct the data. Presented results at an international plasma physics conference, where my contributed oral talk initiated discussions toward new collaborations and research directions.</p> <p><i>Supported by UCLA Physics Summer 2024 Research Fellowship.</i></p>			
	<i>B.C. Regan Condensed Matter Group</i>			1/2024 - 3/2024
	<p>Pedagogical contributions in proving the Feynman Checkerboard at a level suitable for undergraduates, illuminating an accessible way to teach propagators.</p>
